1 Introduction

The Apalis Evaluation Board is a flexible development environment with which you can explore and evaluate the functionality and performance of the Apalis product family.

Complementing the existing Colibri module family, Apalis supports a huge variety of industry standard interfaces, while at the same time providing advanced multimedia and high speed connectivity making it suitable for an almost unlimited number of applications. Apalis interfaces can be easily accessed by means of physical connectors and standard pitch headers. The GPIO usage allows easy probing of a large number of Apalis interfaces and easy access to break and jumper signals as needed.

The Apalis Evaluation Board PCB is comprised of four layers, of which only one is used for high speed signal routing. This demonstrates how the Direct Breakout technology makes it incredibly easy to implement leading edge interfaces with minimal risk and effort. CAE data for the board, including schematics, layout and IPC-7351 compliant component libraries, are freely downloadable from Toradex developer website.

1.1 Purpose of the Datasheet

The datasheet represents the hardware capabilities of the Apalis Evaluation Board. For information on the actual features supported by software, please refer to the relevant SoM product page on the Toradex website.

2 Features

2.1 Overview

The Apalis Evaluation Board provides the following features and communication interfaces:

- 4x USB 2.0 port through on board USB Hub
- 1x USB 3.0 port
- USB 3.0 OTG Micro-AB connector for host and host/client
- USB Client Type B port (shared with the OTG)
- USB Type B port (optionally connected to FF UART via USB to serial converter)
- RJ45 Ethernet (10/100/1000 Mbit)
- 1x SD/MMC 8 Bit
- 1x SD/MMC 4 Bit
- 1x Serial ATA/mSATA (Shared)
- Type Specific Board Connector
- 2x PCIe x1 slot
- Mini PCIe
- Digital (TDMS) interface on DVI-D connector
- Analog VGA interface on a 15 way D-type connector
- Dual channel LVDS interface (up to 24 bit colour)
- Digital RGB interface (up to 24 bit colour)
- Unified Display Interface with built in resistive touch for direct LCD panel connection
- Analog audio I/O on 3.5mm stereo jacks
- HDA 7.1 Codec (including analog connectors)
- 1x S/PDIF In/Out (Out also on TOSLink)
- 2x RS232 Serial Interfaces
- IrDA
- 1x RS422/485 Serial Interface
- 3x I2C, 2x SPI, 4x PWM, 4x Analog inputs
- 2x CAN 2.0B Interface (up to 1Mbit/s)
- Real-time clock with battery backup
- Resistive touch screen connector 4/5-wire
- LEDs and Switches
- Extremely Flexible and easy to use GPIO breakout and jumper area allowing easy signal re-routing, external connection and measurement/probing
- JTAG
- Parallel Camera Interface

2.2 Hardware Architecture Block Diagram

* This is a module-specific feature and may not be supported by all the computer-on-modules in the Apalis family. For more details, refer to the datasheet of Apalis computer-on-modules.

** The breakout/jumper area provides a flexible mechanism for changing the hardware configuration or signal routing for any external circuit.

3 Interface Description

3.1 Apalis Computer-On-Module

Type: MXM3 321 pin Socket

Manufacturer: JAE - MM70-314-310B1

For the pin-out of the Apalis module, please refer to the applicable Apalis module datasheet.

MXM3 SnapLock and Spacers are available on Apalis Evaluation Board for fixing the Apalis module with the carrier board. It is recommended to use M3 size screws to fasten Apalis module with the Spacers.

3.2 Power Supply

Apalis Evaluation Board has two different power connectors that can be used to power the board:

- The connector X15 which has a wide input voltage range of 7-27V DC.
- The connector X17 is a 12V +/-10% input. It must be used when the 12V voltage supply is required on the board (e.g. while using a cooling fan, a PCIe device or when this voltage is needed on the LVDS connector).
The 12V power supply is obtained directly from the connector X17; this means that, even though this voltage is protected by a 2A fuse, it is not regulated.

The on-board power supply provides the following supplies (maximum power).

- 5V / 5A (25W)
- 3.3V / 5A (16.5W)

The supply is protected against reverse input voltage polarity and short circuits, limiting the maximum current to about 5A. However, the protection diode in the input voltage path is thermally not designed to carry such a high current, especially at low input voltages. If your application dissipates more than 20W, please consider one of the following:

- Work with a high input voltage, close to 24V
- Add a heat-sink to the polarity protection diode
- Short the polarity protection diode with a wire (removes the reverse polarity protection!)

3.2.1 Terminal Block Power Supply Connector (X15)

Connector type: AUK TB5102PRB-H

Pin	Description	Voltage / Range
1	GND_IN	
2	PWR_IN	7 – 27V

3.2.2 Barrel Power Supply Connector (X17)

Connector type: Amtek DCJ20-0014TB-L

Pin	Description	Voltage / Range
1	12V_IN	7 -12V
2	GND_IN	

3.2.3 Power Out Header (X25)

Connector type: 1x6Pin Header Male, 2.54mm, Not Assembled

Pin	Description	Remarks
1	3.3V_SW	
2	GND	
3	5V_SW	
4	GND	
5	12V_SW_UNREG_F	2A FUSE
6	V_SUPPLY_FILT_F	2A FUSE

Please note that the pins number 5 and 6 are not regulated because they are respectively directly connected to the power supply connectors X15 and X17.

3.2.4 Power Out Connector (X47)

Connector type: 1x6Pin Header Male, 2.54mm,

Pin	Description	Remarks
1	3.3V_SW	
2	3.3V_SW	
3	3.3V_SW	
4	GND	
5	GND	
6	GND	

3.2.5 Power Control

Power control of the Apalis Evaluation Board is implemented using the Linear LTC2954 Pushbutton On/Off controller and with the signal POWER_ENABLE_MOCI which is used to enable the peripheral power supplies.

For further information about the signals provided by the controller LTC2954 please refer to the datasheet. For more information regarding the power up sequence which is implemented on the board please refer to the document "Apalis Carrier Board Design Guide".

The Power CTRL connector X61 allows the Reset and Power Button control signals to be accessed externally.

3.2.5.1 Power Control Header (X61)

Type: 2 x 3Pin Header Female, 2.54mm

Pin No.	Signal Name	IO Type	Voltage	Pullup/Pulldown
1	PWR_BTN#	I		100k to +1.9V
2	GND	PWR		
3	PWR_CTRL	I	+3.3V max	100k to GND
4	INT#	I		10k to +3.3V
5	FORCE_OFF#	I		100k to +3.3V
6	RESET_MICO#	IO	+3.3V	

The pin 3 of the connector X61 can be used in order to override the Pushbutton controller. The following table shows the behaviour of the board according to the level of the PWR_CTRL signal:

PWR_CTRL Level	Description
0V	The Pushbutton controller is working normally
3.3V	The Apalis Evaluation Board is Always On when power is applied

3.2.5.2 Always On Jumper (JP19)

Jumper JP19 can be used to obtain "Always On" behaviour.

Connector type: 1x2 Pin Header Male, 2.54 mm

Jumper position	Description
Open	Board power supply is controlled via Power On/Off Switch.
Closed	Board power supply will be in the "Always On" state. Apalis Evaluation Board will be powered-up as soon as external power is applied.

3.2.6 FAN Connector

The Apalis Evaluation board provides a FAN connector, X6. The 12V supply which is available at this connector is connected to the 12V regulated power supply using a transistor which is controlled by 3.3V_SW or, optionally, using the GPIO8 signal for software control. Jumper JP20 determines this configuration:

Connector type: 1x3 Pin Header Male, 2.54 mm

Jumper position	Description
1 - 2	Automatic ON
2 - 3	GPIO8 enabled

3.2.6.1 FAN Connector (X35)

Connector type: 1x3 Pin Header Male with friction lock, 2.54 mm

Pin	Signal Name	MXM3 Pin Number	I/O Type	Voltage	Pull-up/Pull-down
1	GND		PWR	PWR_IN	
2	V_FAN_UNREG		PWR	+12V	
3	NC				

Please note that V_FAN_UNREG is not regulated power supply. It will be the same voltage that has been provided on the connectors X17. Use only 12V+/-10% power supply with connector X17.

3.3 Indications

There are four LEDs on the Apalis Evaluation Board to indicate the power supply status.

Ref.	Description
LED9	3.3V
LED10	5V_SW
LED11	3.3V_SW
LED30	12V_SW_UNREG_F

Refer to Apalis Evaluation Board schematics for more details.

3.4 Ethernet

The Apalis Evaluation Board provides an RJ45 connector with integrated magnetics for 10/100/1000Mb Ethernet.

3.4.1 Ethernet (X12)

3.5 USB

3.5.1 USB Host/Client Interface

The Apalis Evaluation Board integrates a USB 3.0 OTG Micro-AB (X49), which is shared with a USB Type B connector (X50) for an additional client/host interface.

3.5.1.1 USB OTG SS (X49)

Connector type: USB OTG A/B, CNC Tech 1003-005-23100

4	GND_USBO1		PWR		
S1/S2	SHIELD		PWR		

3.5.2 USB Host Interface

The Apalis Evaluation Board integrates a 4 port USB Hub (SMSC USB2514B-AEYC) to provide 4x USB 2.0 host interfaces.

For further information about the USB Hub please refer to the SMSC website.

In addition the Apalis Evaluation board features one USB 3.0 Type A (X51) port which can be used with the modules that support USB Super Speed interface.

3.5.2.1 2xUSB Host (X53)

Connector type: Stacked USB 2.0 Type-A, Mill-Max 896-43-008-90-000000

3.6 PCIe

The Apalis Evaluation Board features the ExpressLane™ PEX 8605-AB 4-Lane, 4-Port PCI Express Gen2 Switch from PLX. It is used to connect the standard PCIe interface on the Apalis Module to 2 PCIe x1 connectors and a mini PCIe slot.

For further information about the PEX 8605-AB, please refer to the PLX data book.

3.7 SATA

The Apalis Evaluation board supports the Serial ATA (SATA) interface on the Apalis module and allows peripherals such as external hard drives, SSDs and mSATA SSDs to be connected.

Jumper JP21 control the routing of the SATA signals to connector X37 or to the mSATA slot X36. Use of these interfaces is mutually exclusive:

Connector type: 1x3 Pin Header Male, 2.54 mm

Jumper position	Description
1 - 2	mSATA connector (X36) is active
2 - 3	SATA connector (X37) is active

Pin	Description	Voltage / Range
1	12V_SW_SATA	+12V
2	GND	
3	GND	
4	5V_SW_SATA	+5V

Please note that 12V_SW_SATA is not regulated power supply. It will be the same voltage that has been provided on the connectors X17. Use only 12V +/- 10% power supply with connector X17.

3.8 SD Card / MMC

The Apalis Evaluation Board features 4bit SDIO and 8bit MMC interfaces. The hardware supported card detect function is implemented. It is possible to read the write protect status by using a test point present on the PCB.

3.8.1 SD Card / MMC 8bit (X18)

3.9 Display Interface

The Apalis Evaluation Board provides many options for connecting LCD panels and monitors, with the following four interfaces supported:

- 24 bit digital RGB
- Dual Channel 24 bit LVDS
- DVI-D
- VGA

Almost any TFT or STN display can be connected to the LCD port of the Apalis module by simply connecting the necessary signals from connectors X16 and X20 (which provide standard 2.54mm pitch) to the display.

Toradex provides a range of different tools and utilities to help with the easy configuration of different LCD panels. For details please refer to: <http://developer.toradex.com>

3.9.7 Unified Interface Display (X31)

Apalis Evaluation Board provides a digital RGB interface port (18-bpp) to interface with the LCD panels using a 40-way, Unified Interface Display connector (X15). It also includes a 4-wire resistive touch screen interface on the same FFC connector.

The Unified Interface Display connector (X31) is compatible with the EDT Unified TFT Interface. A variety of LCD panels with integrated touch support for evaluation purposes are available at the Toradex Webshop.

3.9.8 Extended Display Identification Data (EDID)

The I2C2 interface of the Apalis module is used as EDID interface in order to allow the module to query the video capabilities of the connected display.

Through the connectors X39 and X40, it is possible to configure which display interface is connected to the EDID port of the Apalis module.

Since X39 and X40 are standard 2.54mm pitch header, it is possible, using shunt jumpers, to select one or more interfaces that will be connected to the EDID port of the module.

The following table describes how the connectors X39 and X40 should be configured when using different display interfaces.

Connector type: 2x3 Pin Header Male, 2.54 mm

Jumper position X39, X40	Description
1 - 2	VGA (X24)
3 - 4	DVI-I (X11)
5 - 6	LVDS (X13)

3.10 Audio

The Apalis Evaluation Board offers two audio interfaces. The analogue interface which is provided by the Apalis Module is available on connector X26.

The stacked connector offers standard jacks for active loudspeakers or headphones, for line-in and microphone input.

The digital interface which uses the on-board HD Audio Codec ALC898 from Realtek features a 7.1 channel output through the audio jack connector X27 and the headers X41 and X42. Please consult the Realtek ALC898 datasheet for more information.

Before using the digital audio interface on the Apalis Evaluation Board V1.0, please check the NOTE 7 in the Apalis Schematic file. This document is available on the Toradex developer website, in the Carrier Board Design page.

3.10.5 SPDIF Out

The Apalis Evaluation Board features an S/PDIF Optical Transmitter which can be optionally connected to the Apalis S/PDIF output or to the HDA Codec S/PDIF output, by changing the position of the jumper JP25:

Connector type: 1x3 Pin Header Male, 2.54 mm

Jumper position	Description
1 - 2	Apalis S/PDIF Out
2 - 3	HDA S/PDIF Out

3.11 Mezzanine Type Specific

The type specific mezzanine connector provides access to the type specific interfaces on the Apalis module. These interfaces differ between different Apalis modules. Different type specific mezzanine boards are available for each Apalis module and are connected to this interface to provide access to the type specific features. Customers are free to develop their own type specific mezzanine board for prototyping and development purposes. Please refer to the datasheets for the individual type specific mezzanine boards and respective Apalis module for more information.

3.12 Parallel Camera Interface

The Parallel Camera Interface on connector X22 is intended for applications requiring image capture capability from CMOS or CDD image sensors. This interface supports a wide variety of operating modes, data widths, formats, and clocking schemes. For details please see the relevant Apalis module datasheet.

In order provide compatibility with the variety of different parallel camera interface standards, the data signals of this interface have been routed through a reconfigurable jumper area.

Please note that only 8 of the 12 data bit are directly connected to the module. The other 4 data bit need to be connected through the Type Specific connector.

3.13 Digital and Analog I/O

3.13.1 Communication Interface

3.13.1.1 CAN

The Apalis Evaluation Board uses the Microchip MCP2551T-I/SN CAN transceiver to implement two CAN 2.0b interfaces in conjunction with the two CAN interfaces on the Apalis module. The CAN ports are electrically isolated from the system power supply.

The CAN interfaces are available on connector X32.

The CAN connector provides the ability to optionally connect the isolated power supplies to connector pins in order to provide power to external CAN nodes.

3.13.1.2 UART Interfaces

The Apalis Evaluation Board features 4 UART interfaces that are connected to the following connectors:

- UART 1 to the connector X28 (Bottom) through an RS232 transceiver. It can be also optionally connected to a built in USB to Serial transceiver;
- UART2 to the connector X28 (Top) through an RS232 transceiver. It can be also optionally connected to a RS422/485 transceiver.
- UART 3 to an IrDA transceiver X30
- UART 4 to the mezzanine connector X38. Refer [Section 3.11](#).

3.13.1.2.1 RS232 (X28 – Top and Bottom)

Connector type: Stacked DSUB9 Male, NorComp 178-009-613R571

Pin	Signal Name	Description	I/O Type	Voltage	Remarks
U1	UART2_RS232_U_DCD		I		A dedicated pin is not available on the Apalis standard pin-out. Signal is only connected to test-point (TP15).
U2	UART2_RS232_U_RXD		I		
U3	UART2_RS232_U_TXD		O		
U4	UART2_RS232_U_DTR		O		A dedicated pin is not available on the Apalis standard pin-out. Signal is pulled-up to 3.3V using 100K resistor.
U5	GND		PWR		
U6	UART2_RS232_U_DSR		I		A dedicated pin is not available on the Apalis standard pin-out. Signal is only connected to test-point (TP17).
U7	UART2_RS232_U_RTS		O		
U8	UART2_RS232_U_CTS		I		
U9	UART2_RS232_U_RI		I		A dedicated pin is not available on the Apalis standard pin-out. Signal is only connected to test-point (TP16).
L1	UART1_RS232_L_DCD		I		
L2	UART1_RS232_L_RXD		I		
L3	UART1_RS232_L_TXD		O

L5	GND		PWR		
L6	UART1_RS232_L_DSR		I		
L7	UART1_RS232_L_RTS		O		
L8	UART1_RS232_L_CTS		I		
L9	UART1_RS232_L_RI		I		

By changing the position of the Jumpers JP10, and JP12, it is possible to route the signals UART1_TXD and UART1_RXD to the connector X28 (Bottom) instead of the connector X29 and vice versa.

Connector type: 1x3 Pin Header Male, 2.54 mm

JP10, JP12	Description
1 - 2	UART1_TXD / UART1_RXD are routed to RS232 Interface. Connector X28 (Bottom) will be active.
2 - 3	UART1_TXD / UART1_RXD are routed to USB to Serial Interface. Connector X29 will be active.

3.13.1.2.2 USB to Serial Connector (X29)

The Apalis Evaluation Board features a built in USB to Serial UART converter (FTDI FT232RL) which can be used to interface with the serial debug Full Function (FF) UART via the USB Type B connector X29.

Connector type: USB Type B, FCI 61729-0010BLF

Pin	Signal Name	Description	I/O Type	Voltage	Remarks
1	5V_USB_D		PWR	+5V	
2	USBD_N		I/O		
3	USBD_P		I/O		
4	GND		PWR		
S1/S2	SHIELD		PWR		

Please note that the UART-1 signal are shared with RS232 interface. By changing the position of the Jumpers JP10 and JP12, it is possible to route the signals UART1_TXD and UART1_RXD to the connector X29 instead of the connector X28 (Bottom) and vice versa as mentioned in [Section 3.13.1.2.1, RS232 \(X28- Top and Bottom\)](#).

3.13.1.2.3 RS422/485 (X55)

Connector type: DSUB9 Male, Tyco 1734351-1

Pin	Signal Name	MXM3 Pin Number	I/O Type	Voltage	Pull-up/Pull-down
1	GND		PWR		
2	NC				
3	NC

5	RXD-		IO		
6	NC				
7	NC				
8	TXD+		IO		
9	TXD-		IO		

The jumpers JP5, JP6, JP7, JP8, JP9 and JP11 provide hardware configuration for this interface:

Connector type: 1x2 Pin Header Male, 2.54 mm

Jumper	Status	Function
JP7	CLOSED	ECHO disabled (the sender cannot read the message just sent)
JP5, JP8	CLOSED	Insert the 120ohm bus termination (for RS422)
JP6, JP9	OPEN	Full Duplex Configuration
JP11	CLOSED	The upper RS232 is disable

3.13.2 Digital Interface

3.13.2.1 Switches / LEDs

The Apalis Evaluation Board features eight LEDs (four green and four red), four switches and four buttons.

Interfaces to and from these devices are available on connector X34. They can be directly connected to the GPIO breakout connectors or to additional custom specific hardware.

Please note that the buttons and switches are not de-bounced.

3.13.2.1.1 LED/Switches (X34)

Connector type: 2x10 Pin Header Female, 2.54 mm

18	LED_8		I	+3.3V	100K to GND
19	GND		PWR	+3.3V	
20	+3.3V		PWR	+3.3V	+3.3V

3.13.3 Analog Interface

The Analog outputs are implemented as Pulse Width Modulate (PWM) signals feeding discrete RC filters with a time constant of 3.3ms.

The Analog inputs are directly connected to the GPIO breakout area.

3.13.3.1 Analog IO (X14)

Type: 2x8Pin Header Male, 2.54mm

3.14 Real-Time Clock (RTC)

The Apalis Evaluation Board uses the STMicroelectronics, M41T0M6 chip as external RTC. A battery holder (BAT1) is available on the Apalis Evaluation Board for RTC power backup.

Jumper (JP22) is used to selection of the internal RTC or external RTC. Backup battery power can be diverted to either internal RTC or external RTC based on the jumper JP22 setting.

Connector type: 1x3 Pin Header Male, 2.54 mm Pitch

Jumper position	Description
1 - 2	Internal RTC (available on Apalis Module)
2 - 3	External RTC (available on Evaluation Board)

For more details about internal RTC, please refer Apalis computer-on-module datasheet.

3.14.1 Battery Holder (BAT1)

A 20 mm (diameter) coin cell/battery should be used with the Battery Holder (BAT1). Coin cell can be used to provide power backup to the external RTC circuits when external power supply is not available.

Supported batteries: CR2032 or similar coin cells..

Connector type: Renata HU2032-LF

Pin	Description	Voltage
1	VCC_BATT	+3.0V
2	GND	

3.15 JTAG

The Apalis Evaluation Board provides a JTAG interface to the JTAG port available on Apalis modules.

Connector X33 provides an interface to an external JTAG device via a standard 2.54mm shrouded and keyed header.

In addition, the Apalis evaluation Board features a spring loaded Pogo-pin connector X59 which is positioned directly underneath the installed Apalis module, allowing direct connection with the Apalis module JTAG test points.

Before using the JTAG interface on the Apalis Evaluation Board V1.0, please check the NOTE 9 in the Apalis Schematic file. This document is available on the Toradex developer website, in the Carrier Board Design page.

3.15.1 JTAG to Host (X33)

3.16 GPIO Usage

The GPIO breakout connectors offer the flexibility to map the GPIOs of the Apalis module to either the on-board function or to external hardware.

The factory setting is a straight through jumper setting, meaning that the X3-A row is connected straight to the X3-B row. This is also true for the connectors X6 and X9.

To allowing easy measurement, probing, and re-routing, all signals residing on the male header are also available on a female connector in parallel.

To map MXM3 pin with the corresponding GPIO numbers which are specific to individual Apalis modules, please refer to the applicable Apalis module datasheet.

B39	I2C1_SCL		IO	+3.3V	1.8K to +3.3V
B40	I2C1_SDA		IO	+3.3V	1.8K to +3.3V

3.16.11 Function 3 Female (X10)

Type: 1x40Pin Female, 2.54mm

Pin-out identical to X9 Pins A1 to A40

3.16.12 GPIO 3 Female (X8)

Type: 1x40Pin Female, 2.54mm

Pin-out identical to X9 Pins B1 to B40

4 Default Signal Mapping

The table below lists the default signal mapping (factory setting). Every row of the table shows the mapping of an Apalis pin to the function or connector on the Evaluation Board.

Legend:

Signal name:	GPIO number on the Apalis module
X3 Row A, X6 Row B, X9 Row A	Pin number on the patch panel connector X2/X5/X8 Apalis side (one end of the jumper)
X3 Row B, X6 Row A, X9 Row B	Pin number on the patch panel connector X4/X7/X10, Evaluation Board side (the other end of the jumper)
External Connector	If the signal is available on an external connector the connector's pin number is listed here
Conn. Type	Lists, if a signal is level shifted between the patch panel connector X4/X7/X10 and the external connector
Internal Function	if a signal is not directly accessible on an external connector, but is used to control an on-board function, the function is listed here. For details please refer to the schematics of the Evaluation Board.
