### 3. Description of Changes

---

#### Change #1: Fix HAR-4399 LVDS instability issue

- Using screened NXP i.MX8 SoCs which don't suffer from the LVDS instability issue ([HAR-4399](#))
- There is no change in SoC part number

### 4. Customer Impact

---

#### Hardware

- Fixed issue "HAR-4399 instability issue (flickering) on the i.MX 8QM and i.MX 8QP LVDS interface" described in the Errata/Known Issues section <https://developer.toradex.com/products/apalis-som-family/modules/apalis-imx8#errataknown-issues>. Customers who are not using the LVDS interface or don't depend on this interface during early development are not affected by this errata and could continue ordering the Apalis iMX8QP 2GB WB V1.1B version as long as it's available.

#### Software

- This change doesn't have any impact on software according to NXP. It is expected that the software for Apalis iMX8QP 2GB WB V1.1C will support V1.1B.
- Apalis iMX8QP 2GB WB V1.1C is planned to be a Volume Product Candidate: A Sample product we plan to promote to a Volume Product with no significant changes. If complete verification is successful, this product will get the same long-term software support as a Volume Product.

Our latest software downloads are available on our developer website <https://developer.toradex.com/software>.
